TITLE: Low-Threshold Pulse-Height Discriminator

PERIODICAL: Nukleonika, 1960, Vol. 5, No 3, pp 157 - 160

TEXT: The authors describe the simple circuit of a highly sensitive pulse-height discriminator intended for use in simple spectrum analyzers required in the identification and differentiation of radioisotopes. Figure 1 shows the circuit diagram of the externally excited relaxation system with two resistance-capacitance couplings. The circuit uses one duotriode and one pentode. Provided that grid and plate voltages are stabilized within 2% and the heating voltage within 10%, the discriminator operates within a threshold range of 50-1,500 mv. Minimum threshold height depends on the stability of feed voltages, while the maximum is determined by the length of the linear section of the input triode characteristics. The discriminator operates on negative pulses, the resolving time is 10 microseconds. A photomultiplier may be directly attached to the output of a pulse-height analyzer using this discriminator circuit. Pertinent tests

TITLE: Device for burning overflow fuel in burner. CZ Pat. No. PV 4688-64

SOURCE: Vynalezky, no. 8, 1966, 13

TOPIC TAGS: liquid fuel, powdered fuel, fuel control, fuel nozzle, combustion chamber, burner

ABSTRACT: A device is introduced for burning fluid or powdered fuel formed in a burner with a saturated combustion chamber and the fuel intake inside the pipe which supplies the oxidants. At least one hollow cylinder is placed in the combustion chamber parallel to its longitudinal axis or coaxial at the outlet of the fuel nozzle. A part of this hollow cylinder reaches into the pipe used for the supply of oxidants.

Br. ab. WYRWICKA, W.

Rate of regeneration of sciatic nerve in white mouse. W.
Wywicksa (*Acta Biol. exp., Poland.*, 1960, 28, 147-153).--Rate of
regeneration of the sciatic nerve, crushed in the hip region, of a white
mouse is about 1 mm. in 24 hr. during the 1st 2 days, increases to
a max. of 3 mm. in 24 hr. at the 4th or 5th day, and then remains
constant until the 6th day. D. V. PANKS.

Ex. ab. WYRWICKA, W.

9/11-9 Nervous System

Conditioned reflexes of second type. I. Transformation of conditioned reflexes of 1st type into conditioned reflexes of second type. J. Komarsh and W. Wywicka. II. Effect of diminished alimentary excitability upon conditioned reflexes of second type. W. Wywicka. (Acta Med. exp. Polon. 1960, 14, 183-203, 204-214). I. Elaboration in dogs of alimentary conditioned reflexes of 2nd type (performance of motor reaction) to stimuli formerly eliciting conditioned reflexes of 1st type is much more difficult than is elaboration to distinctly new stimuli. Probably the direct alimentary reaction evoked by conditioned stimuli of 1st type is antagonistic to acquisition of a motor reaction, and thus inhibits elaboration of 2nd type reflexes.

II. Reduced alimentary excitability reduces both salivary and motor reactions of 2nd type of conditioned reflexes in dog, affecting the weaker stimuli more strongly. When alimentary excitability was diminished sufficiently for the dog to refuse food, the motor reaction could still persist. Acute extinction of the reflex was accelerated by reduced alimentary excitability.

Motor conditioned reflexes. IV. Extinction of conditioned reflexes of the motor analyzer against excitatory or inhibitory background. V. Mechanism of the motor conditioned reflex. W. Wyrwicka (*Acta biol. exp. Lats.* 1952, 10, 123-130, 131-137). IV. Dogs in whom alimentary conditioned reflexes to a no. of stimuli had been induced were used. In the first series of experiments the reflex to one stimulus was allowed to deteriorate—"extinction"—and during the process food was given at times uncorrelated with that stimulus. In the 2nd series of experiments, no food was given in the experimental chamber during the process of extinction. The effect of other conditioned stimuli in producing the alimentary reflex was greatly reduced in the second series, not in the first. V. Dogs were trained to produce a motor reaction, putting the right foreleg on the food-table, and an alimentary response, salivation, in response to an auditory stimulus. These conditioned reflexes were then allowed to undergo spontaneous deterioration, "extinction". It was then found that on reinforcing the stimulus with food not only the salivation but also the acquired motor reaction to the stimulus alone was restored. D. F. HAWKINS.

Title : Study of Motor Conditioned Reflexes. 6. On the Influence
of an Experimental Situation Upon the Course of Motor
Conditioned Reflexes.

Orig Pub : Acta biol. Exptl., 1956, 17, No 1, 189-203

Abstract : In each of six dogs, two food motor conditioned reflexes
with different motor effects were obtained. If these two
reflexes were developed in one and the same or in analo-
gous experimental situations, interchanges of the two
motor reactions were observed. In the case of the rapid
appearance of one of these, the other reaction appeared.
If both reflexes were obtained correspondingly in two dif-
ferent situations, neither the interchange of the motor

reaction nor the appearance of one following the other could ever be noted. Each movement in this case appeared in its "correct" form (i.e., corresponding to the situation in which it was developed) even then when one and the same conditioned stimulant was used in both situations. The mechanism of this phenomenon is determined by the deciding influence of the experimental situation on the level of excitability in the centers of the movement investigated.

Abstract: [Author's summary modified] Acids as given in the title, unknown today, were obtained by the author. She applied, with satisfactory results, the method of condensation of sodium derivatives of these acids with ethyl ester of the α -bromopropionic acid. From esters and chlorides of these acids, hydrazides and amides were obtained. Five Western references.

Title : Acoustic Impedance of Plane Generators: Rectangle, Ring, Ellipse.

Orig Pub : Proc. II. conf. ultrason., 1956, Warszawa, PWN, 1957, 99-104

Abstract : To calculate the acoustic impedance of radiators, use is made of double integration of the Green's function over the surface of the radiator

$$\xi = -i \frac{\rho}{S} \iint_{S'} \frac{u_0(r')}{u_0(r)} G(r, r') dS' dS$$

where ξ is the impedance, S the surface of the radiator, u_0 the amplitude of the oscillation velocity on the surface of the radiator, while r and r' determine the positions of the two different points on the radiator.

At a constant distribution of the amplitude of the vibra-

tional velocity on the radiator, which represents a portion of an infinite stationary plane, $u_0(r')/u_0(r) = 1$. The Green's function for the wave equation in a space bounded by the plane is of the form $[\exp(-ikh)]/2\pi h$, where $h = r - r'$. The double integral is divided into a real and imaginary part, and the integrand is expressed in terms of Bessel functions. This is followed by an expansion in series, which converge rather rapidly.

Final expressions are given for the real and imaginary parts of the impedances of a rectangular and plane radiator with sides $2a$ and $2b$, with $a \geq b$, for a ring radiator with an external radius a and an internal radius b , and for an ellipse with axes $2a$ and $2b$ ($a \geq b$).

It was found that the acoustic impedance of an ellipse can be represented by the acoustic impedance of a circle, inscribed inside the ellipse, with the correction in the form of an infinite series. The closer the ellipse approaches a circle in shape, the more rapidly does this series converge. When

Symposium on Electroacoustic Transducers. Krynica, 1958

Proceedings of the Symposium on Electroacoustic Transducers [held in] Krynica, 17-26 September, 1958. Warsaw, Panstwowe Wydawnictwo Naukowe, 1961. 442 p. Errata slip inserted. 630 copies printed.

Sponsoring Agency: Polish Academy of Sciences. Institute of Basic Technical Problems.

Ed. in Chief: Janusz Kacprowski, Doctor of Sciences; Editing Committee: Ignacy Malecki, Professor, Doctor of Sciences; Wincenty Pajowski, Doctor; and Jerzy Wehr, Master of Sciences; Secretary: Juliusz Mierzejewski.

PURPOSE: This book is intended for physicists and acoustical engineers.

COVERAGE: The book is a collection of detailed research papers constituting the proceedings of a conference held in Krynica from 17 to 26 September 1958 under the auspices of the Institute of Technical Problems, Polish Academy of Sciences.

Card 1/8

Symposium on Electroacoustic Transducers

POL/5981

The following basic problems are treated: 1) theoretical research on energy transformation processes; 2) experimental development of new types of transducers; 3) electroacoustic measurements; 4) technology of piezoelectric and magnetostrictive materials; 5) construction of transducers for technical needs; and 6) design of acoustical transducer systems. No personalities are mentioned. References (if any) follow the individual articles.

 TITLE : The Influence of Polar Components on the Compo-
 sitions of Ternary Positive-Negative Azeotropes
 Containing n-Undecane
 ORIG. PUB. : Bull Acad Polon Sci, Ser Sci Chim, Geol et
 Geograph, 6, No 8, 517-522, XLIV (1958)
 ABSTRACT : The authors have investigated the effect of
 different polar components on the composition of
 a ternary saddle-point azeotrope of the type
 $[(-)(A_1, P_1) (+) H_1]$, where H_1 is the perma-
 nent nonpolar component (n-undecane), A_1 is the
 acid component (acetic (A_1), propionic (A_2),
 or butyric (A_3) acid), and P_1 is the basic
 component (pyridine (P_1), 2-picoline (P_2), or
 2,4-lutidine (P_3)). The investigations were
 made by a comparative method described in an
